

Small article storage magazine

Small article storage magazine

Box dimensions width 210 mm, depth 340 mm, height 150 mm, (other dimensions possible).

In this storage magazine 8 boxes are placed which are filled one after the other by a production machine.

The amount of filling can be defined by variable time or number of pieces.

The advantages:

Longer production intervals without manual change of boxes enhance the efficiency of production.

The distributor is moveable, the boxes are fix so that you are independent of the weight of the full boxes.

In each box the desired number of parts can be produced.

In case of problems in the production or bad produced parts not the whole production lot has to be checked; only the effected boxes.

The storage magazine is mounted on wheels and is mobile, so that it can be placed at each production machine when necessary.
