

# Flatmaterial Swift BAH-1200

## Swift BAH - 1200 for flatmaterial

This swift is controlled absolutely without any contact of the material to the swift. The material that has to be feeded to the machine runs between two sensors where it changes the electrostatic field. If more material is needed by the machine the flat material is pulled up and the distance to pole A is reduced. The swift begins to dewheel the material. The speed of the swift is proportional to the materials distance to pole B. As closer the material is to pole A as faster the swift dewheels the material to feed the machine. With a regulator the speed can be adapted to the input of the machine. If the machine stops the speed gets reduced till the swift stands. The point between the two poles where the speed is zero can be adjusted at the swift.

Technical data:	power supply	230 V
	power consumption	0,4 KW / 1,1 KW
	speed	app. 0 -13 rpm / 0 - 50 rpm
	flatmaterial ring inner dia.	app. 350 - 720 mm
	max. height of ring	app.150 mm
	diameter of table	app. 1200 mm
	max. ring weight	app. 600 kg
